Healesville & District Hospital & Yarra Valley Community Health Redevelopment

This significant expansion of the Healesville and District Hospital and Yarra Valley Community Health, which includes a new operating theatre, expanded community health centre, and the introduction of renal dialysis, will deliver a 30% increase in services provided from the site. The redevelopment will consolidate existing and new services into a single integrated medical centre. Existing buildings will be fully refurbished. A new dialysis unit and new operating suite will be constructed. A new entry and foyer created between the two existing buildings will create a single point of arrival and reception for the redeveloped facility.
